
Equilibrium constants for hydrolysis and associated equilibria in critical compilations

Berkelium(III)

Equilibrium reaction	IgK at infinite dilution and T = 298 K
	Brown and Ekberg, 2016
$\text{Bk}^{3+} + 3 \text{H}_2\text{O} \rightleftharpoons \text{Bk(OH)}_3(\text{s}) + 3 \text{H}^+$	-13.5 ± 1.0

P.L. Brown and C. Ekberg, Hydrolysis of Metal Ions. Wiley, 2016, pp. 419–422.

Distribution diagrams

These diagrams have been computed at two Bk(III) concentrations ($1 \text{ mM} = 1 \times 10^{-3} \text{ mol L}^{-1}$ and $1 \mu\text{M} = 1 \times 10^{-6} \text{ mol L}^{-1}$) with the ‘best’ equilibrium constant above. Calculations assume $T = 298 \text{ K}$ for the limiting case of zero ionic strength (*i.e.*, even neglecting plotted ions).
